

“I first worked with Mid South Drilling & Blasting in 2005 while constructing a portion of the NC 98 Bypass for NCDOT. Mid South drilled and shot two borrow pits in some areas within 25 feet of some of our stationary equipment. Not only did they meet or exceed our gradation requirements but they did so without any appreciable damage to our stationary equipment or any negative impact on production.

Particularly impressive was the professionalism of the onsite personnel. Their attention to detail enabled them to operate safely and efficiently. They were responsive to our concerns and never allowed breakdowns or other difficulties to impact our schedule. Without a doubt the integrity and good character of the Mid South organization created a highly productive work environment that contributed to the early completion of the project which was a factor in winning a Pinnacle Award for best highway project.”
